Technical Experience

Anti-Apartheid Legacy Centre, UK Placement Full Stack Developer (Volunteer) Oct 2025 – Apr 2026

- Built a full-stack educational web application using React (TypeScript), Spring Boot, and PostgreSQL, implementing authentication, role-based authorisation, and secure data access for protected user information.
- Implemented 10 interactive puzzle mechanics including fill-in-the-blank, drag-and-drop, and decision trees, tailored for learners aged 10–14.
- Deployed frontend on Vercel and backend on Render with a cloud PostgreSQL database, ensuring a production-ready architecture.

TELUS International AI Data Solutions Online Data Analyst (Freelance) Aug 2023 – Sep 2024

- Evaluated 1,000+ search engine queries and search results across multiple platforms using proprietary tools and strict quality guidelines to measure accuracy, relevance, and ground ness.
- Conducted rigorous data quality assessments on web queries, digital mapping data, audio recordings, and ad placements to improve search model accuracy and user experience.

Technical Projects

Cocoa Disease Inspection Platform Jul 2026 – Present

Python | FastAPI | React | YOLO | PostgreSQL | Azure | Docker

- Developed a cloud-native AI inspection platform YOLO26n (nano) object detection model exported to ONNX Runtime for efficient real-time CPU inference.
- Built a FastAPI backend integrating AI inference, PostgreSQL persistence and Azure Blob Storage to manage inspection images and prediction metadata.
- Developed a React PWA enabling field inspectors to capture images, receive real-time diagnoses, and submit human correction to improve dataset quality.
- Implemented a human-in-the-loop feedback workflow with dataset export capabilities to support future model retraining and MLOps pipelines.

Fluffy Ontology Alignment Jan 2026 – May 2026

Python | SPARQL | SBERT

- Designed an ontology alignment system combining lexical (ISub), and SBERT-based semantic matching across 6 OAEI benchmark tracks.
- Built sematic search and SPARQL pipelines to integrate structured knowledge graphs and evaluate alignment quality using Precision, Recall and F-score.
- Exported merged ontologies and standardised reports to support interoperable data sharing.

Venue-and-You Jan 2025 - May 2025

Java | MySQL

- Led a team of 5 to develop Java/MySQL venue management system, ranking top 5 out of 33 projects on university showcase day through effective GitHub collaboration and project delivery.

Educational Qualifications

City, University of London Sep 2023 – May 2026

- Graduated with First Class Honours (BSc Computer Science)

Haydon School, Pinner, UK Jan 2019 – May 2022

- A-Levels – Mathematics (A), Computer Science (A), Physics (B)
- GCSCs: 9 subjects at A*/A (including Maths, Triple Science, English, Computer Science)

Other Experience

Sainsburys, London, UK Customer Assistant Aug 2023 – Present

- Appointed store representative, supporting customer service and day-to-day team operations in a high-volume retail environment.
